

# CUSTOMIZED PERFECTION

HighLine

UNIDRAIN

Unidrain is the very essence of flexible innovation and attractive design. We were the first to move the floor drain completely up against the wall, enabling a solution with a single-sided slope and a simple, precise, and waterproof installation.

Unidrain's unique floor drain, using globally patented technology, creates more than a bathroom. It creates a daily experience, and it lets you live out your design dreams down to the smallest detail.

Custom

unidrain

HighLine

Azure mosaic tiles. Pearls in all the colours of the rainbow. Your favourite type of wood. Or a black, minimalist glass screen. Whether you want your bathroom drain to be attention-grabbing or practically invisible, HighLine is the perfect solution. This exclusive new line from Unidrain replaces the traditional grating with a panel, a cassette or a base, and makes it possible for you to give your bathroom your own individual look. So whether your wish list says steel, Corian®, glass, tiles, wood, aluminium or another material, HighLine gives you amazing design freedom when it comes to the visible part of the drain. HighLine was developed specially for Unidrain's globally patented technology, and integrates quickly and easily with all our drain fittings.

OUR  
SOLUTION

YOUR  
DESIGN

Custom

Custom without frame.

## FUNCTIONAL DESIGN AT FLOOR HEIGHT

HighLine was developed by architects and has been thought through down to the smallest details – as with all Unidrain's products. The design is exclusive and offers new, creative ways to design your bathroom with small or large tiles. The floor only needs slopes from one side, and there's no need for cumbersome tile cutting. This makes the tiling and fitting quick and easy.

HighLine consists of three solutions, each of which replaces the traditional drain grate: Panel, Cassette and Custom. The Panel solution is supplied com-

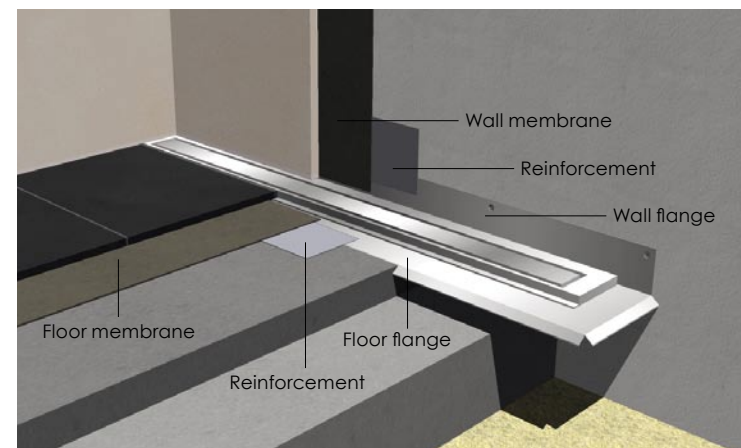

plete with a panel of solid polished or brushed stainless steel or Corian® in the colour you choose. For Cassette or Custom, Unidrain only supplies the cassette or the base. The material to cover the HighLine solution is not included. Note also that the drain fittings themselves are not included in the HighLine range. The Unidrain fittings and outlet units must be purchased separately.

All three solutions can be supplied with a 10, 12, 15 or 25 mm high frame, to ensure it fits tiles with varying degrees of thickness.

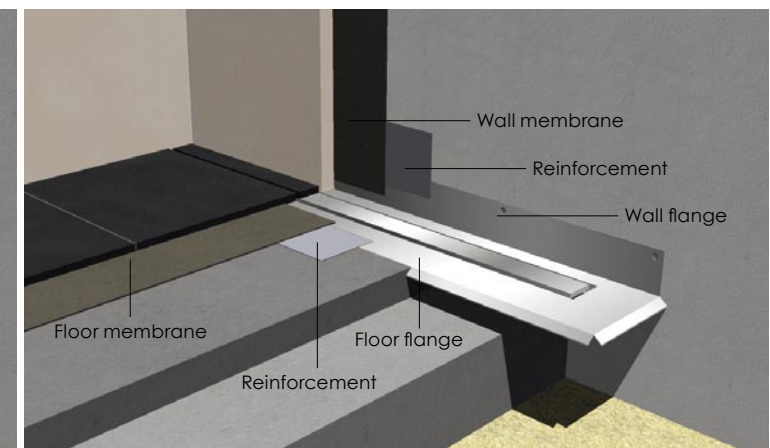

## SIMPLE. SAFE. CONVINCING.

When you choose HighLine, you choose a one-of-a-kind solution that's both easier and quicker to work with than the other products. Unidrain's drain fittings are placed up against the wall, and precisely because they are fixed to the wall, the patented vertical wall flanges ensure a totally watertight overlap with the walls' membrane. In the same way, the horizontal floor flanges ensure watertight overlap with the floor membrane and tiles.

Unidrain is tested and approved for all types of wet-room floors – from light wood joists to heavy concrete constructions. If you are fitting into wood joists and other light floor constructions, we recommend the Unidrain assembly set.

## UNIQUE SOLUTIONS

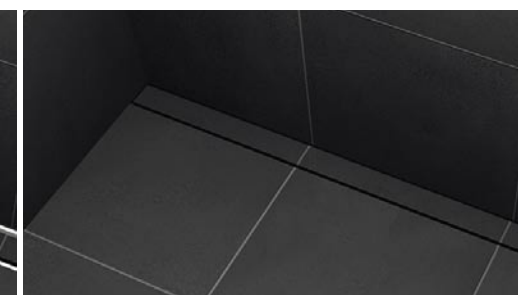

### Panel

Exclusive panel solution in steel or Corian®. Choose between solid polished or brushed stainless steel and white/black/grey/anthracite/colourful Corian® that radiates personality. The panel is available both with and without a frame.

### Cassette

The Cassette solution makes it easy to create an individual look for your bathroom. Matching tiles or any other kind of material are placed precisely in a brushed stainless steel cassette whose height can easily be adjusted in relation to the chosen material. Cassette is available with or without frame.

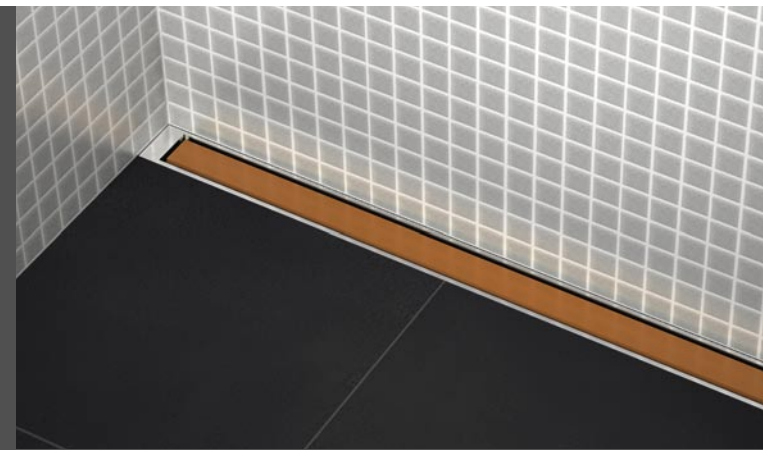

### Custom

Custom is the simple, streamlined solution that can be used in almost any way you can imagine. The chosen material is placed on a height-adjustable base. The standard Custom comes without a frame, which puts greater demands on precision in the fitting phase. However, the result is a practically invisible drain. Custom is also available with a frame.

# CREATE A UNIQUE BATHROOM

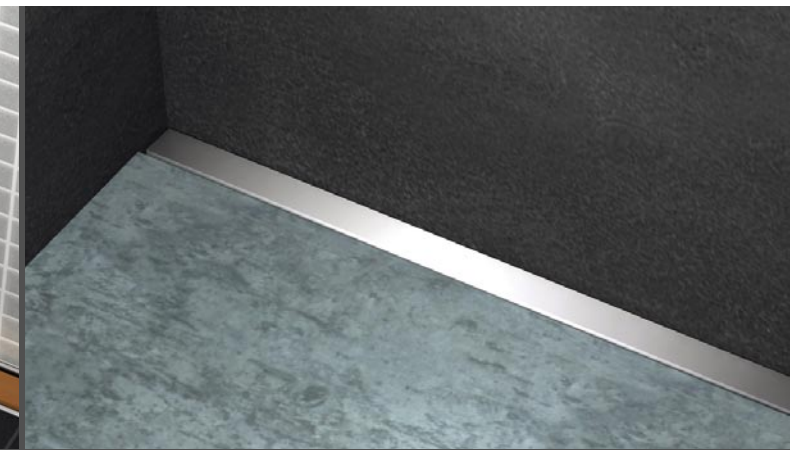

Unidrain's HighLine range lets you create a bathroom that is perfect down to the smallest detail. So regardless of what feature you think makes an ideal bathroom, HighLine makes it possible to create your ultimate solution and the right individual look.

Panel, Cassette and Custom are all unique solutions that help give a home or public space a personal and attention-grabbing quality. The possibilities are endless: only your imagination sets the limit.

# ONE-OF-A-KIND RANGE WITH AMAZING POSSIBILITIES

The HighLine range consists of Panel, Cassette and Custom. All three solutions are delivered with or without frame, depending on the look you want. The frames are available in various heights – 10, 12, 15 and 25 mm – so they fit tiles of different thickness. HighLine only consists of elements for the top, visible part of the

drain. The fittings and outlet units should be purchased separately. Note also that the material to be mounted on the Cassette and Custom solutions (e.g. tiles, wood or glass) are not included. Only Panel comes complete with a steel or Corian® panel.
