Nursing Tables Are Important

Today parents with small children are very active. They bring their babies with them while travelling, shopping or eating out. Therefore, nursing tables in public spaces are important. It is a way to show the parents and their children that they are just as welcome as other people.

A Product With A Long History

Nursing table Robust was invented about 35 years ago by Ingvar Persson. Since then, it has been available on the Swedish market. It can now be found in a large number of different places all over Sweden and also in the other Nordic countries and in several European countries. Some improvements have been made over the years, but the basic idea remains the same: a practical and reliable nursing table that is easy to use and nice to look at.

Swedish Design And Quality

Nursing table Robust is designed and made in Sweden.

Function

Robust is a wall-mounted nursing table that folds up on the wall. Since the table is supported by a gas spring, it can easily be put up and down with one hand. When it is put up it is automatically locked in place. Mattress is included.

Material

The side members, the wall studs, the shelves and the top are made of lacquered solid wood (beech or oak). The table is made of melamine or direct laminate and fitted with a polyether mattress with a polyurethane coating. The hinges and the lock are made of stainless steel.

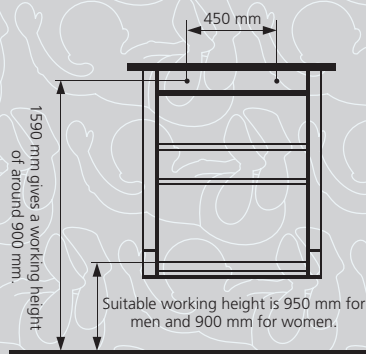

Dimensions:

Width 660 mm
Height 780 mm
Depth closed 200 mm
Depth open 770 mm

Putting Up

Robust should be put up on the wall using screws. A direction is enclosed. Suitable working height is 90 cm for women and 95 cm for men.
