

## OUTDOOR FROST-PROOF AUTOMATIC DRINKING SYSTEMS

Ensures frost-proof water supply for free-range pigs

## FROST-PROOF AUTOMATIC DRINKING SYSTEM FOR FREE-RANGE PIGS

Frostline automatic drinking systems ensure fresh, cool water for the pigs, all year round, regardless of the weather. In winter, the pigs can drink what they need, which means a minimum of work with the water allocation. In summer, there are no huge troughs of stale water that require changing the water and cleaning due to algae. The drinking bowl is made from stainless steel and is quite deep. The pigs operate the bowl by pressing with the root of their noses instead of their snouts. This provides the opportunity of a water surface forming to allow the pigs to drink naturally.

The design and function of the bowl makes it possible to reduce water wastage to a minimum.

### Drinking bowl made from stainless steel Pigs – Type SA 640

The automatic drinking system can turn both ways and is provided with a quick coupling to allow it to be changed quickly between wells.  
Product no. A640: 20 cm tall

### Automatic Drinking System Type SA

Height: 20 cm from cover  
200 mm PVC well  
15 mm Tremhøj self-emptying stop valve  
Riser pipe volume: 18-23 cm<sup>3</sup>

### Operation

The riser pipe of the water tap is provided with a self-emptying 3-way stop valve installed in a well that has been buried at frost-free depth.

When the water tap is not in use, the valve and riser pipe are emptied of water that might otherwise freeze.

The water tap and thus the valve and riser pipe are frost-proof as long as the water supply line for the tap does not freeze.
