

BRASS FITTINGS FOR WATERING AND IRRIGATION QUICK®

The QUICK® fittings for watering and irrigation can be used for cold and hot water transport in irrigation and sprinkling systems. These fittings are completely in brass and suitable for professional use, in agricultural facilities, greenhouses, nurseries and industrial plants. They are highly resistant to prolonged exposure to the sun, atmospheric agents and light. The bayonet-type connection of the QUICK® fittings, common to the various types and dimensions, is the particular factor that renders couplings with different rubber tube sizes and/or threaded tubes simple and secure. The connection between various fittings requires no tools, as these fittings are agile and rapid to connect even in the most problematic conditions.

DESIGN

Brass body
Gasket in EPDM rubber
Female fitting gasket in NBR elastomer

TECHNICAL FEATURES

Pressures: maximum working pressure	6 bar
Temperatures: maximum working temperature (TS)	from -30°C (excluding ice) to +60°C
Threading: pipe connection	threads according to ISO 228/1

OPERATION

The bayonet-type connection allows QUICK® fittings to be connected in only 1/4 of a turn. Once hooked up, the two winglets on the underside of the fitting make accidental detachment of the fitting itself impossible.
