

Declaration of Hydraulic Tightness for the Expansion Socket (HDPE Drainage Systems)

Valsir hereby declares that the expansion socket intended for use in HDPE drainage systems guarantees hydraulic tightness at a static pressure of 3 bar, equivalent to a geodetic head of 30 meters, for a continuous period of 24 (twenty-four) hours.

This guarantee applies to products up to and including a nominal diameter of Ø160 mm.

The guarantee is strictly subject to the condition that the expansion socket is installed in axial alignment with the preceding and/or succeeding pipe or fitting, within a maximum angular tolerance of 0.5 degrees.

Any deviation beyond the specified alignment tolerance shall render this guarantee null and void.

This declaration is issued in accordance with Valsir's technical specifications and current installation guidelines.
